

# 007 Jarhead Tank Alarm Monitor

The 007 Tank Monitor is designed for use on most single or double walled aboveground tanks. The 007 is primarily used by the automotive and industrial markets to help prevent costly and unnecessary tank overflows or bulk product shortages for such fluids as oils, waste oils, antifreeze, water and liquids with a low flash point. This three-piece package will monitor either a high or low tank level. It is a low voltage supervised system. When preset float is activated a 103-decibel siren will sound and a strobe light will flash. Control panel is mounted indoors and Jarhead Tank Sensor fits any 2" tank bung opening. Transformer is 12-Volt DC. This unit is engineered to control up to 10 diaphragm pumps and/or electric pumps as well as additional strobes and sirens.

- ✓ Avoid Costly overflows or untimely shortages
- ✓ Supervised System
- ✓ Low Voltage
- ✓ Strobe and Siren
- ✓ Can drive up to 10 solenoid valves
- ✓ Easy Installation
