

Balcrank

The Products you want from a Company you Trust

A heavy duty handle that's easy to read and easy to use...Balcrank's *Pro Series Electronic Display*

Balcrank has combined oval gear technology (the industry's standard for accuracy) with the reliability of a one-piece rugged metal body.

The durable Professional Series handle

- Heavy duty, one-piece metal construction
- Oval gear meter technology - accuracy for high volume and hard working shops
- Large, easy to read LCD display
- Two outlet positions - inline or pistol grip
- Free-moving, ball bearing swivel won't stiffen under pressure
- Trigger guard included to prevent accidental dispensing

Fluid Dispensing Systems

for the Industrial, Commercial & Automotive Industry

Pro-Series Convertible Electronic Display Control Handle

The Professional Series handle uses industry standard oval gear technology combined with a simple to read, large LCD display. It features a six digit totalizer and four digit resettable totalizer to keep track of dispensed amounts. A third totalizer tracks daily or weekly usage. AA batteries are easily replaced with no loss of memory by the handle. Extensions for the pro series electronic display, include rigid, flex, flex 90, and straight with Balcrank's new automatic tip. With heavy duty one-piece metal construction, this meter is specifically designed for high volume shops and rugged environments.

Oval Gear Technology

The heart of the Pro Serie's accuracy is the oval gear technology. This is the exact same measuring system used in the most expensive electronic meters. The oval gear arrangement gives this meter class leading precision of $\pm 0.5\%$. That means a 4 quart fill will be accurate to within about half an ounce. That is the kind of precision that will keep your shrinkage to a minimum.

Ordering

Purchasing your new electronic handle is easy. Order the basic meter. Then choose the extension that best fits your needs.
